

FRESH AIR!

Thermo-Mixer® Fresh Air Ventilation System

- Improves Indoor Air Quality without dumping combustion byproducts into your building.
- Controlled Infiltration reduces cold drafts and improves negative pressure conditions
- Energy Efficient - Uses no fuel until all “waste” heat is used
- No unsightly outdoor mechanical equipment to maintain
- Improves summer ventilation and night cooling.
- Available up to 10,400 CFM
- Reduces costly uncontrolled exfiltration
- Helps cool overheated spaces during moderate weather
- Simple Installation - No additional roof penetrations, roof support, or concrete pads
- Multiple stage, modulating operation for maximum flexibility and energy efficiency
- Totally enclosed, energy saving motor for dependable operation and reduced electrical use.
